

Probability per time window

$N_0 = 7,215,990$

$$P_{\text{sim}}(N = n) = \frac{N_n}{\sum_{m=0}^{\infty} N_m}$$

Poisson ($\mu = 0.012$)

$N_1 = 86,135$

$N_2 = 534$

$N_3 = 3$

Number of dark-noise photoelectrons per PMT
